Re: Mechanical Lippage Tuning System (MLTS)

Valued Customer,

We are pleased to recommend the use of the Mechanical Lippage Tuning System for the installation of our thin porcelain tiles.

The MLTS tensioning system reduces the lippage between large thin porcelain tiles allowing a proper helping the alignment. Besides, it allows the complete embedding of the MLTS base in the mortar without creating any voids beneath the edges of the tile.

Ensuring a void free mortar coverage and a right alignment of the edges the tiles, the MLTS system represents an important tool for a high-quality installation, both for floor and wall.

For any further information please contact the MLTS directly (<http://www.mltsystem.com/>) or turn to us for any contact information.

Kind regards

Roberto Pederzoli
