

Trend Q Loves The MLT system

Trend Q is a engineered stone made with polyester resin at 9-12%. It is 1/4" thick and flexible. It is produced in slab format: 50x120, then it is cut down to standard or cut to size format. Because the tile is flexible, the material can be install fast and without problems if a proper adhesive is used, like Platinum 254 rapid from Laticrete or with Mapei Granirapid. Because of its thickness and flexibility, the perfect companion for Trend Q is the MLT system, a new leveling system, that is by far the best available today. We were lucky enough to follow its development and test it when it was ready. The results by far surpassed our expectation and so we have endorsed fully. We recently test it on a job site and all the installers were very pleased. It can speed up installation by at least 1/3 of the time and we observed a group of 4 installers a d 1 helper installing an average of 560 sqf of 24x24 per day (7 working hours). We will continue to suggest the use of the MLT system to all our customers.

Best regards
